

# Bonsai Intelligence

**Affordable autonomy  
for any off-road job**

Deploy faster, spend less, and  
run your entire fleet from Bonsai's  
connected platform.

**More with less.**

**40%  
lower**

Operating costs

**Faster results.**

**60%  
quicker**

Job completions

**Proven reliability.**

**500k+  
acres**

of data captured

**Bonsai Intelligence  
makes it easy to manage  
autonomous fleets across  
any environment.**

**Bonsai Autonomy** is our vision-based, embodied AI that enables machines to perceive and act independently.

**Bonsai Pilot** is our cloud-based workspace that unifies people, equipment, and jobs.

## Bonsai Autonomy

The perception and decision-making engine that gives machines the awareness to understand their surroundings, navigate complex terrain, and perform tasks safely and efficiently.

**Experience-Based Intelligence:** Learns directly from real-world operations—adapting to new environments the way a skilled human operator would.

**Vision-First Autonomy:** Uses cameras and AI to perceive its surroundings without reliance on GPS or pre-mapped data.

**Global Learning Foundation:** Trained on more than 500,000 acres of diverse field data across continents, crops, and conditions.

**Rugged Real-World Performance:** Designed to handle dust, debris, and low-visibility conditions with human-like confidence.

**Continuous Adaptation:** Improves over time by learning from each mission, making every deployment smarter and more capable than the last.

## Bonsai Pilot

Where growers plan, monitor, and manage every aspect of their autonomous operations — from mission planning to telemetry — all in real time.

**Unified Operations:** Manage farms, users, and locations in one dashboard

**Fleet Intelligence:** Track vehicles, automate maintenance, and monitor performance

**Field Management:** Map, organize, and analyze field data for better decisions

**Telemetry & Monitoring:** See every machine in real time, from anywhere

**Operational Automation:** Plan routes, execute jobs, and monitor progress

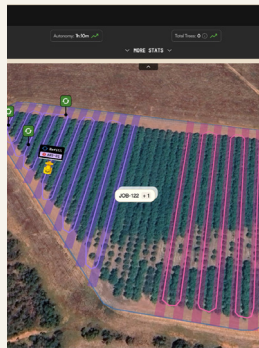

**Reporting & Insights:** Turn data into decisions that improve productivity and reduce downtime

## How it works

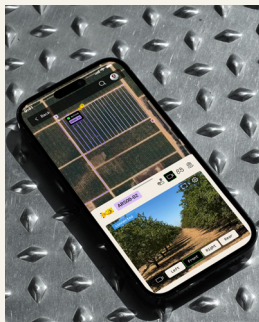

### 1. Equip

Deploy Bonsai Intelligence on your existing equipment or integrate seamlessly into next-generation machines.

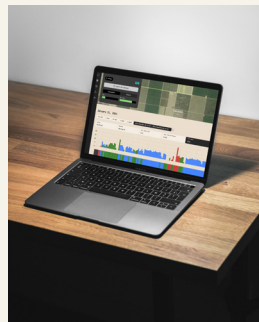

### 2. Initialize

Map your fields in minutes to tailor Bonsai Pilot to your operation. Bonsai Autonomy learns from every task — adapting across orchards, vineyards, and fields to make your fleet faster and smarter over time.

### 3. Operate

Use Bonsai Pilot to plan and assign jobs instantly. Assign Bonsai-enabled machines to your fields, then manage and monitor everything in the cloud — anytime, anywhere.

### 4. Optimize

Gain real-time visibility into fleet performance, utilization, and key metrics in Bonsai Pilot. Use data insights to optimize efficiency and get more from every acre.
